

# SECTION H

## Gazetteer

The gazetteer which follows lists all features named on the maps in this volume of the Tactual Atlas. It also provides the location reference for each, using an alpha-numeric system. This is a simple grid of letters running horizontally across the map-sheet and numbers running vertically down, which are used to pin-point a small area of the map in which a feature can be found. A detailed explanation of such grid systems can be found in 'A Map User Guide to Reading Tactual and Low Vision Maps' and also in the first volume of the Tactual Atlas.

The names are listed alphabetically and each is followed in turn by its map abbreviation, the number of the map on which it can be found, and its alpha-numeric location on the map-sheet.

Capital cities are indexed to the introductory map 'Australia: General Reference' and to the various State maps in Section C: People. All other names are indexed to each of the maps on which they occur.

The following notes will make it easier for you to locate features named on the maps:

- In general, the alpha-numeric codes refer to the centre of the braille name or to the braille abbreviation, not to the actual location of the feature.
- Each abbreviated name appearing on the State maps is distinguished in the gazetteer by the letter 's' in square brackets.
- Abbreviations are replaced by the symbol "" in cases where the name being referenced appears in full on the map.
